

SUMMARY OF TOITŪ NET CARBONZERO CERTIFICATION

FOR WESTPAC NEW ZEALAND

Summary for 01 July 2022 to 30 June 2023

TOITŪ NET CARBONZERO ORGANISATION CERTIFIED: WESTPAC NEW ZEALAND

Toitū net carbonzero means committing to ongoing reductions while achieving annual measurement and compensation for at least the Toitū mandatory emissions. ii

Measured emissions to ISO 14064-1:2018 and <u>Toitū</u> requirements

Managing and reducing against Toitū requirements

Compensated remaining emissions following <u>Toitū</u> requirements and covering minimum of <u>total Toitū</u> boundary

This report provides a summary of the annual greenhouse gas (GHG) emissions inventory and management report for Westpac New Zealand as part of the annual work to achieve Toitū net carbonzero certification. Additional details of the annual achievements, commitments, and verification are available on request from Westpac New Zealand.

The purpose of this report is to measure and manage our GHG emissions, which contributes to our operational emissions target under our 2025 Sustainability Strategy.

ACHIEVEMENTS

These achievements have been verified in line with ISO 14064-3:2019 and Toitū net carbonzero Programme Technical Requirements for the 01 July 2022 to 30 June 2023 measurement period.

EMISSIONS MEASUREMENT

Westpac New Zealand's greenhouse gas emissions for this year (01 July 2022 to 30 June 2023) were 4,705.19 tCO $_2$ e. Westpac New Zealand has measured the emissions resulting from its operational activities, purchased energy, and selected impacts from its value chain activities, including business travel, freight, and waste sent to landfill. The annual inventory is detailed in the following table. Emissions and reductions are reported using a location-based methodology. $^{\rm iii}$

		GHG emissions (tCO₂e)				
Category (ISO 14064-1:2018)	Scopes (GHG Protocol)	Base Year 2018/2019	Previous Year 2021/2022	Current Year 2022/2023		
Category 1: Direct emissions	Scope 1	1,673.85	981.92	988.57		
Category 2: Indirect emissions from imported energy (location-based method*)	Scope 2	1,901.04	1,812.34	896.69		
Category 3: Indirect emissions from transportation	Scope 3	2,591.20	1,055.23	2,155.25		
Category 4: Indirect emissions from products used by organisation		1,180.55	1,101.00	664.68		
Category 5: Indirect emissions associated with the use of products from the organisation		0.00	0.00	0.00		
Category 6: Indirect emissions from other sources		0.00	0.00	0.00		
Total gross emissions*		7,346.63	4,950.49	4,705.19		
Category 1 direct removals		0.00	0.00	0.00		
Total net emissions		7,346.63	4,950.49	4,705.19		

^{*}Gross and net emissions are reported using a location-based methodology. Contact Westpac New Zealand for full details.

The operational GHG emission sources included in this inventory are shown in Figure 1 below.

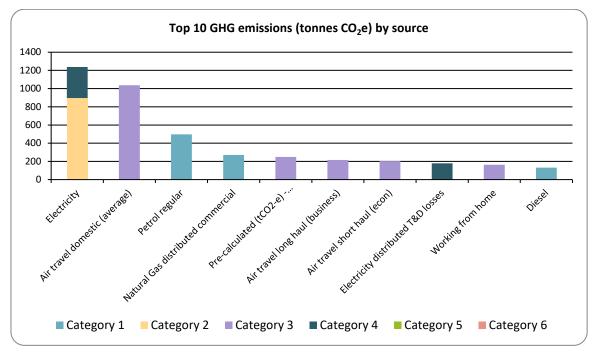

Figure 1: Top 10 GHG emissions (tonnes CO₂e) by source

SCOPE OF MEASURED INVENTORY

CONSOLIDATION APPROACH

An operational control consolidation approach was used to account for emissions. Organisational boundaries were set with reference to the methodology described in the GHG Protocol and ISO 14064-1:2018 standards. iv

Westpac New Zealand has applied an operational control consolidation approach, which aligns with the direct operational footprint of all its businesses in New Zealand.

The criteria we used to define organisational boundaries consisted of mapping an organisational chart to show our New Zealand operations, including the legal structure of those entities. The chart has been further supplemented with our physical sites to give a complete picture of substance of the organisation.

BOUNDARIES

Westpac Banking Corporation, which is headquartered in Australia, is the ultimate owner of Westpac New Zealand.

The figure below shows the direct operational footprint of all Westpac Banking Corporation Group businesses within New Zealand including Westpac New Zealand Limited, Westpac Banking Corporation – NZ Branch, BT Funds Management (NZ) Limited (BTNZ).

The figure was developed based on physical sites occupied by the organisation including corporate sites, branches, standalone ATMs and third-party data centres.

Branches and standalone ATMs in scope include active sites and non-active sites which still have a lease commitment.

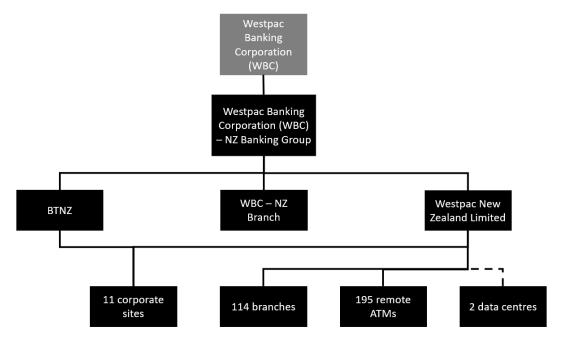

Figure 2: Organisational structure showing business units included and excluded

No business units have been excluded from the GHG emissions boundary. Excluded emissions do not exceed 5% of the total footprint within the organisation boundary stated.

MANAGING AND REDUCING

This is the fifth year of reporting under the Toitū net carbonzero programme. An absolute reduction in Category 1 and 2 emissions of 1,689.62 tCO₂e has been achieved against base year. A reduction in emissions intensity (for Category 1, 2 and mandatory Category 3 and 4 emissions) of -0.55 CO₂e/\$M has been achieved based upon a 5-year rolling average, adjusted for inflation.

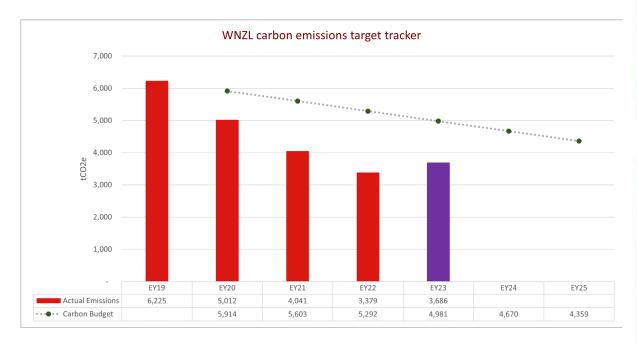

Figure 3: Performance against target since the base year

The Greenhouse gas (GHG) emissions for Westpac New Zealand for the current reporting period are detailed in the table below. There was a decrease of 2,491.79 tCO₂e (gross emissions) compared to the base year across all Categories, with a decrease of 1,692.80 tCO₂e (gross emissions) compared to the base year for Scope 1 and 2 and a decrease of 798.99 tCO₂e (gross emissions) compared to the base year for Scope 3.

The most significant decreases achieved were for fuel consumption in the vehicle fleet and electricity. However, it is worth noting that the electricity emission factor for 2022 has decreased. This can be attributed to the low GHG emissions reported during the latter half of that year.

More detail on these results is provided in the emanage inventory spreadsheet.

The performance against our targets has been largely driven by electricity emission factor reductions and conversion of our fleet.

Target name	Baseline period	Target date	Type of target (intensity or absolute)	Current performance (tCO ₂ e)	Current performance (%)	Comments
Reduce total category 1 and 2 emissions in compliance to Toitū Rule R6.4a	2019	2025	Absolute	1,898.87	47.3%	This reduction has largely been driven by a decrease in our electricity emissions. However, it is worth noting that the electricity emission factor for 2022 has decreased. This can be attributed to the low GHG emissions reported during the latter half of that year.
Reduce total Scope 1, 2 and 3 mandatory emissions, Toitū carbon boundary	2019	2025	Absolute	3,936.35	36.8%	This reduction has largely been driven by electrification of our fleet and early stages of behaviour change embedment resulting in reduced air travel (compared to our EY19 baseline). As above, the reduction has also largely been driven by a decrease in our electricity emissions. However, it is worth noting that the electricity emission factor for 2022 has decreased. This can be attributed to the low GHG emissions reported during the latter half of that year.

COMPENSATION FOR EMISSIONS

Westpac New Zealand is committed to doing no harm while working on reducing emissions. Accordingly, Westpac New Zealand has invested in carbon credit projects to compensate for the Toitū mandatory emissions resulting from their operations this year. ⁱⁱ

Removal credits: 4,568 (153 from #0400, PFSI Totaranui, Clova Bay and 4,415 from #0483b, PFSI Spraypoint)

Please note the verified removals and carbon credits used are also accounted within the national inventory of the country of origin.

All carbon credits have been cancelled on the Toitū Envirocare register and will be cancelled (or equivalent) on the relevant external registry within one month of certification. Specific details of cancellation, including serial numbers, will be available on the external registry:

 $\underline{www.epa.govt.nz/industry-areas/emissions-trading-scheme/market-information/voluntary-unit-cancellations} \ .$

COMMITMENTS

REDUCTION TARGETS

Westpac New Zealand is committed to managing and reducing its emissions. Westpac New Zealand's commitments, including GHG emissions reduction targets and plans, have been reviewed and are in line with Toitū net carbonzero programme requirements.

During the development of our target, we referred to and assessed relevant policy and initiatives, including our Climate Leaders Coalition membership.

There is an emphasis on supply chain engagement, to create cascading measurement and management of emissions along our full value chain.

Target name	Baseline period	Target date	Type of target (intensity or absolute)	Categories covered	Target		КРІ	Responsibility	Rationale
Reduce total category 1 and 2 emissions in compliance to Toitū Rule R6.4a	2019	2025	Absolute	All category 1 and 2 combined	-30%	Base year emissions (tCO ₂ e): 3,574.89 Target year emissions (tCO ₂ e): 2,502.42	n/a (no intensity target set)	Zoe Tilsley, Sustainability Manager	The target is achievable through continued implementation of reductions projects like those discussed below.
Reduce total Scope 1, 2 and 3 mandatory emissions, Toitū carbon boundary	2019	2025	Absolute	Most category 1-6 Toitū programme boundary emissions, this excludes emissions from the following sources; accommodation, electricity associated with Data Centre usage, paper usage and working from home.	-30%	Base year emissions (tCO ₂ e): 6,224.54 Target year emissions (tCO ₂ e): 4,357.18	n/a (no intensity target set)	Zoe Tilsley, Sustainability Manager	The target is achievable through continued implementation of reductions projects like those discussed below.

Looking ahead, Westpac New Zealand is currently focused on the following projects.

Objective	Project	Responsibility	Completion date	Potential co-benefits	Potential unintended consequences	Actions to minimise unintended consequence
Electricity from general operations	Initiatives to ensure energy efficient appliances and HVAC services have been installed in line with our capital budgets to reduce the load we require from the grid.	Colin Trenwith, National Facilities and Ops Manager	On-going	Reduced operating costs through lower electricity use.	None anticipated	n/a
Data Centre	Infrastructure refresh to improve energy efficiency of storage	Shane Kuzmanic, Service Group Owner - Core Infrastructure	On-going	Reduced energy usage in our Data Centres	Potential waste from removed infrastructure	Removed infrastructure is scrubbed for security purposes, after which it is recycled through our partnership with remarkIT.
Fleet EV Transition	100% of car fleet electric vehicles or plug in hybrid.	Justin Brochocki, Head of Property and Commercial Services	30/09/2025	Improved staff education through the increased understanding of PHEV and EV's and reduced operating costs.	Increased Electricity requirements	Ongoing exploration potential actions to minimise unintended consequences.
Air Travel	Travel Exploring behavioural change initiatives in FY23 for the business, encouraging tele or video conferencing use where appropriate.		30/09/2023	Improved staff education, supported by internal email from CEO, Catherine McGrath, detailing travel expectations. Therefore, resulting in improved travel behaviour internally.	None anticipated	n/a
GM Sponsor	Transition of key activities and GM sponsorship to Chief Transformation Officer, Martin Gaskell. Includes ongoing initiatives, and targeted reductions across all emissions sources.	Martin Gaskell, Chief Transformation Officer Net Zero Operations Working Group	30/07/2024	Improved transformational outcomes, contributing to our emissions reduction target.	None anticipated	n/a

CERTIFICATE DETAILS

Certification status: Toitū net carbonzero certified organisation

Certificate number: 2022253J, Year 2 of 3 year certificate period

Valid until: 25 October 2025

Measurement period: 01 July 2022 to 30 June 2023

Base year: 01 July 2018 to 30 June 2019

Audited by: Toitū Envirocare

Level of assurance: Reasonable for categories 1 to 4 except for Limited mandatory Category 3 (freight of cash).

Disclaimer: This Certification Summary Statement is a summary of the information (validated and verified for relevant components of the certification) considered for certification and the certification decision. It should not be taken to represent the full submission for certification. Whilst every effort has been made to ensure that the information in this Statement is accurate and complete, Enviro-Mark Solutions Limited (trading as Toitū Envirocare) does not, to the maximum extent permitted by law, give any warranty or guarantee relating to the accuracy or reliability of the information.

- All direct emissions from the activities of the organisation, or the part of the organisation being certified. Direct emissions come from assets owned or controlled by the organisation, such as emissions from fleet vehicles, boilers, generators and HVAC systems.
- All emissions from imported energy (electricity, heat and steam)
- Emissions from business travel and freight paid for by the organisation
- Emissions associated with waste disposed of by the organisation, as well as the transmission and distribution of electricity, and natural gas

[©]Enviro-Mark Solutions Limited 2020.

ii The mandatory sources that must be included in any Toitū carbon programme inventory include:

iii All purchased and generated energy emissions are dual reported using both the location-based method and market-based method in the certified Inventory Report and appendices. This summary document presents the information using the location-based method. Note that reductions and any required compensation are assessed using that method. Dual reporting illustrates the role of supplier choice, onsite renewable energy generation and contractual instruments in managing indirect emissions from energy alongside any ongoing energy efficiency and reduction efforts. This dual reporting aligns with ISO 14064-1:2018 and the GHG Protocol. Please contact this organisation for the dual reporting details applicable to this inventory.

^{iv} Control: the organisation accounts for all GHG emissions and/or removals from facilities over which it has financial or operational control. Equity share: the organisation accounts for its portion of GHG emissions and/or removals from respective facilities.
